Investment objective

BDL Convictions is a long-only European equity fund (EU + UK + Switzerland + Norway) invested in companies with a market capitalization or revenue above EUR 1 billion. Performance relies on a fundamental research process and proprietary analysis. The fund mainly draws on the long ideas of BDL Rempart. BDL Convictions follows a "best effort" ESG approach with full portfolio coverage by external and internal ESG ratings.

Risk scale - SRI

The SRI assumes that you hold the product for the recommended minimum holding period of 3 years.

Investors' attention is drawn to the fund's risk factors, including equity risk, credit risk, liquidity risk, counterparty risk, and risks related to derivatives and trading counterparties.

Management Commentary

The BDL Convictions fund gained 3.9% in April, against a benchmark index posting 5.4%.

Some stocks underpinned performance. Saint Gobain (+0.8%) reported first-quarter sales 2% ahead of expectations, buoyed by a more buoyant March after a start to the year penalised by unfavourable weather conditions in Europe and the United States, which had a negative impact on construction volumes. The Group also confirmed its outlook for 2026. Canal+ (+0.5%) reported results in line with expectations, with stable sales at group level, including a slightly negative but improving contribution from MultiChoice. The valuation remains attractive, with a PE of 6x and an estimated cash flow yield of 18% to 2028, incorporating most of the expected synergies with the South African multinational. Siemens (+0.4%) rebounded after a decline in March due to technical factors, notably futures sales in Europe, benefiting from an easing of tensions in the Middle East. Meanwhile, Eiffage (+0.3%) recovered from its March correction and will pay a dividend of €4.8 per share in May.

Conversely, a number of positions weighed on performance. Philips and Siemens Healthineers fell in the wake of the medical technology sector, amid fears of pressure on margins in the event of a lasting inflationary shock linked to the conflict in Iran (transport, plastics, electronic components). GE Healthcare's profit warning reinforced these concerns: although limited to a cut of around 3% in net profit forecasts, it caused European stocks to fall by 4-6% as a knock-on effect. Although the risk to margins cannot be ruled out, we believe it will remain contained. After a correction of around 20% since the start of the conflict, Philips and Siemens Healthineers are now trading at historically low valuations, below 14x expected earnings to 2027.

Glossary

Sharpe Ratio: The Sharpe ratio measures excess return relative to the risk-free rate, divided by volatility. It indicates the reward for taking risk. The higher it is, the better the risk-adjusted performance. A negative Sharpe simply means the fund is doing worse than a risk-free investment.

SICAV: Open-ended Investment Company.

Investment rate / exposure rate: The investment rate corresponds to the amount of assets invested expressed as a % of the portfolio. The exposure rate corresponds to the investment rate, plus the impact of derivative strategies. It represents the percentage of actual assets exposed to a given risk. Derivative strategies can aim to increase exposure (leverage strategy) or reduce exposure (hedging strategy) of the underlying asset.

Net Asset Value: Price of a unit (mutual fund) or share (SICAV).
